SUMMARY

Recent CS grad (VCU, May 2026) specializing in full-stack development and machine learning. Experience building production software at NASA Langley (Python, MATLAB) and deploying React/Node.js applications. Seeking SWE roles

EDUCATION

Virginia Commonwealth University, College of Engineering *Richmond, VA*
B.S. in Computer Science | Concentration in Software Engineering | Minor in Artificial Intelligence *May 2026*

Relevant Coursework: Data Structures & Object Oriented Programming | Algorithm Analysis with Advanced Data Structures | Databases | Software Analysis & Testing | Software as a Service | Operating Systems | Data Communication & Networking | Design & Implementation User Interface | Computer Systems | Programming Languages

PROFESSIONAL EXPERIENCE

Software Engineering Intern *May 2025 – Aug 2025*
Amentum, Supporting NASA Langley Research Center *Hampton, VA*

- Built Python + MATLAB data pipeline processing real-time UDP telemetry from secure NASA networks, reducing manual analysis time by ~40% and enabling live monitoring across 3 test systems.
- Engaged in collaborative design sessions and brainstorming with a team of software engineers to propose and refine new application features, improving system architecture and functionality.
- Managed source control using Git throughout the development lifecycle, maintaining clean version history and enabling team collaboration

Computer Science Teaching Assistant *Aug 2024 – May 2026*
VCU College of Engineering *Richmond, VA*

- Delivered personalized coding assistance tailored to individual learning styles, resulting in optimized student code
- Collaborated with professor and other TAs to enhance student support efficiency and response time
- Mentored 150+ students on computer science concepts, improving lab results and test scores by 20%

LiDAR and Camera Sensor Data Fusion Researcher *Aug 2024 - May 2025*
DoD ASPIRE Capstone Project, U.S. Army *Richmond, VA*

- Developed a multi-modal deep learning system using PyTorch and EfficientNet for 85% accurate pedestrian detection
- Engineered a custom data preprocessing pipeline that transformed sensor inputs for efficient neural network training
- Implemented Agile (Scrum) methodology with two-week sprints and daily stand-ups, meeting all project milestones on schedule

PROJECTS

Sports Analytics Platform *Aug 2024 - Dec 2025*

- Developed a full-stack sports analytics application using Next.js, React, TypeScript, and Tailwind CSS for the frontend, and Node.js/Express for the backend.
- Integrated real-time data sources, including the Sportradar API and Odds API, to provide live odds comparison and tracking of player statistics across various sports.

LEADERSHIP & ACTIVITIES

VCU Sustainability, Volunteer, VCU *Jan 2023 - May 2023*

- Contributed 80+ hours to the Learning Gardens initiative supporting food security and sustainable agriculture

National Society of Black Engineers (NSBE), Member, VCU *Aug 2022 - May 2026*

- Participated in engineering conferences and leadership workshops, enhancing professional development
- Mentored underclassmen in computer science, providing academic guidance and career development support

SKILLS

Programming Languages: Java | Javascript | TypeScript | Python | C/C++ | SQL | C# | MATLAB | LabVIEW

Software Engineering Tools: Docker | Quarto | Git / Github | Unity | Selenium | Figma | Flask | Agile Methodology | Unit Testing | OOP

Web Development Skills: React | Node | CSS | HTML | REST APIs
